

1-6 Relations and Functions

Mapping Diagram

Set of Ordered Pairs
 $\{(2, A), (2, B), (2, C)\}$

$(x, y) \rightarrow (\text{input, output}) \rightarrow (\text{domain, range})$

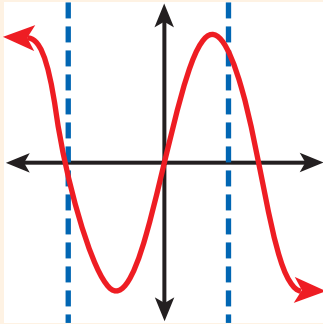

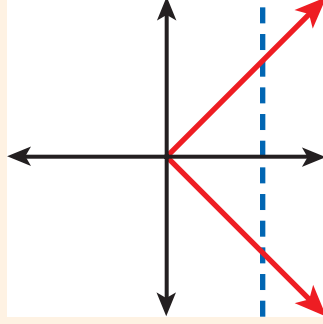

Not a function:
 The relationship from number to letter is *not* a function because the **domain value 2** is mapped to the **range values A, B, and C.**

Function: The relationship from letter to number is a function because **each letter in the domain** is mapped to **only one number in the range.**

1-6 Relations and Functions (continued)

Vertical-Line Test

WORDS	EXAMPLES	
<p>If any vertical line passes through more than one point on the graph of a relation, the relation is not a function.</p>	 <p>Function</p>	 <p>Not a Function</p>
