

Similar Triangles

Angle-Angle (AA) Similarity

- If two angles of one triangle are congruent to two angles of another triangle, then the triangles are similar.

Examples

- Determine whether each pair of triangles is similar. Justify your answer.

YES

AA

Examples

- Determine whether each pair of triangles is similar. Justify your answer.

YES

AA

Side-Side-Side (SSS) Similarity

- If the corresponding side lengths of two triangles are proportional, then the triangles are similar.

Examples

- Determine whether each pair of triangles is similar. Justify your answer.

YES
SSS

Examples

$$10.8 = 10.8$$

- Determine whether each pair of triangles is similar. Justify your answer.

$$\frac{1.8}{3} \times \frac{2.1}{3.5} \times \frac{3.6}{6} \rightarrow 12.6 = 12.6$$

YES

SSS

$$6.3 = 6.3$$

Side-Angle-Side (SAS) Similarity

- If the lengths of two sides of one triangle are proportional to the lengths of two corresponding sides of another triangle and the included angles are congruent, then the triangles are similar.

Examples

- Determine whether each pair of triangles is similar. Justify your answer.

$$\frac{12 \times 2}{10 \times 2} = \frac{24}{32}$$
$$384 = 384$$

YES
SAS

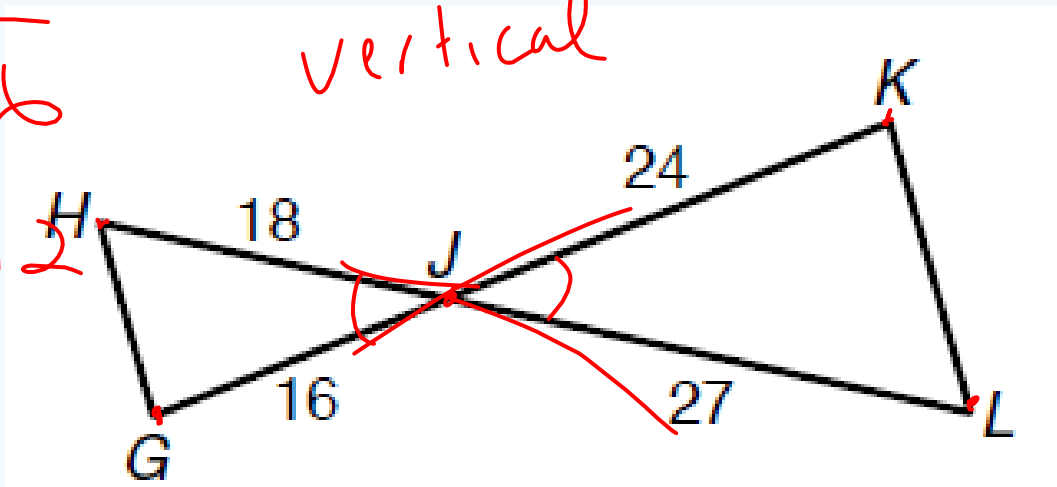

Examples

- Determine whether each pair of triangles is similar. Justify your answer.

$$\frac{27}{24} = \frac{18}{16}$$

$$432 = 432$$

vertical

YES
